China Node Report 2024-2025

Prof. Zhouying JIN

Chinese Academy of Social Sciences

Dr. Ying BAI

Beijing Academy of Soft Technology

Activities of China Node

- **China Node engaged in the research launched by MP on “International Governance Issues of the Transition from ANI to AGI”**
 - Twenty-two members of MP China Node, hailing from research institutions including the University of Science and Technology of China, Tongji University, the Chinese Academy of Social Sciences, the Capital Institute of Science and Technology Development Strategy, the China Biodiversity Conservation and Green Development Foundation, Science Press, enterprises such as Alibaba, as well as retired experts from overseas institutions, have participated in this research from 2020 to 2025.
 - Zhouying Jin was initially a member of the 9-person Steering Committee, and later became a member of the 7-person Steering Committee. As an Asian representative, she listed the Chinese Academy of Social Sciences and the Beijing Institute of Soft Technology as participating institutions in the research activities; as one of the 9 members of the steering group within MP, she was responsible for conducting interviews with experts in China’s AI field.
- **Chinese version of Executive Summary of *State of the Future 20.0***
- **Chinese version of Report on *Governance of the Transition to AGI Urgent Considerations for the UN General Assembly***
- **11th World Futures Day**

The fourth Chinese editions of The Future of Humanity - from Global Civilization to Great Civilization

The differences between the fourth edition and the third edition:

- Over 100 revisions and improvements
- The biggest changes include
 - Five Reflections-Worthy Issues of Relevant AI
 - The Six Waves of Futures Studies
- The English Third Edition will be published in the first half of 2026.

Five Reflections-Worthy Issues of Relevant AI (Excerpted from the Fourth Edition)

1. Will humans be happy if robots do most of the difficult tasks?
2. Driverless cars, unmanned farms, unmanned banks... Is it worthwhile to eliminate all interpersonal interactions and all human labor through advanced technologies? We should recognize the six significances of human labor.
3. What aspects should the global governance of AGI include in setting red lines for artificial intelligence (including setting red lines for “unmanned operations”)?
4. Eliminating human interaction also eliminates an important source of human creativity.
5. The advantages and misconceptions of educational intelligence.

Sorted Out the Six Waves of Futures studies, a New Attempt in the History of Futures Research

● The Six Waves of Futures Studies

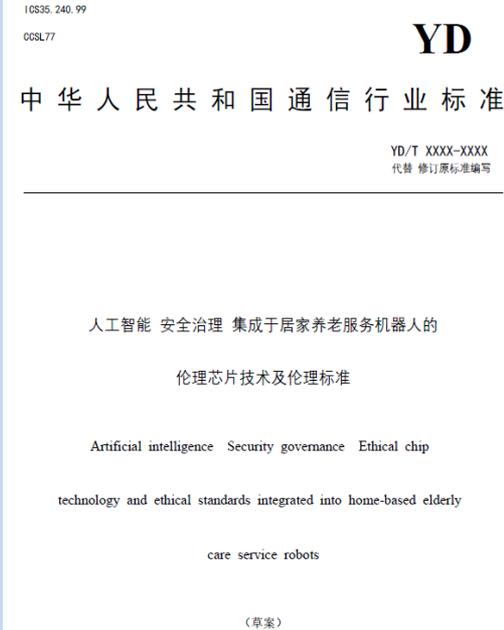

—Learn from thinkers and futurists who drive progress in human society

- The First Wave——Before Common Era
- The Second Wave——From the 2nd to the 17th century
- The Third Wave——In the 18th century
- The Fourth Wave——At the beginning of the 19th century
- The Fifth Wave——In the 20th century
- The Sixth Wave——In the 21st century

I have sorted out “The Six Waves of Futures Studies” and its contributors from ancient to modern times, including 35 institutions and 100 pioneers and thinkers. MP has been listed as one of the 35 relevant institutions, and 11 MP members have been selected as the 100 contributors.

Next Steps of Work

- **Participate in the Formulation of Safety and Ethical Standards for Home Care Service Robots**
 - Project Name: Ethical chip technology and ethical standards integrated into home-based elderly care service robots, which Belongs to the Category of Artificial Intelligence & Security Governance
 - Collaborators: Southeast University, Beijing Academy of Soft Technology, Shanghai Dewang Information System Co., Ltd., & Artificial Intelligence Research Institute of the Ministry of Industry and Information Technology of China (MIIT)

- **AI Warning Film: Are Humans Ready? (Lack of Funding Support)**
- **Promote the Publication Approval of the Chinese Version of *Work/Technology 2050: Scenarios and Actions***

谢谢!

Thank you!
